

## What is the Census?

- Every 10 years, the U.S. Census Bureau counts every person in the U.S. as mandated in the Constitution. The next enumeration will begin mid-March and will be the first to rely heavily on online responses.
- Every Californian counts. The Census counts every person living in the U.S. once, only once, and in the right place.
- This data is used to distribute billions of dollars in federal funds to state and local governments.
- It's about fair representation: every 10 years, the results of the Census are used to reapportion the House of Representatives, determining how many seats each state gets.
- It's a civic duty: completing the Census is mandatory and it's a way to participate in our democracy and say: "My story counts!"
- It's about redistricting: after each decade's Census, state officials redraw the boundaries of the congressional and state legislative districts in their states to account for population shifts.
- Your data is confidential: federal law protects your Census responses. Your answers can only be used to produce statistics.

## How is the Census data used?

To allocate funding for communities.

To ensure public safety and plan new schools and hospitals.

- People use Census data to decide where to open businesses and offices, which create jobs.
  - By law, the U.S. Census Bureau cannot share the data with immigration or law enforcement agencies or allow it to determine eligibility for government benefits.
